ICT INFRASTRUCTURE

Regardless of whether we think about process automation, cloud-based systems or enhanced online collaboration – a secure and reliable ICT infrastructure plays a key role in development and maintenance. Being a leading IT integrator, NEXT DIGI, offers a full spectrum of ICT infrastructure services for supporting digital transformation of your organization.

We believe an efficient and secure ICT infrastructure is essential to ensure your staff and customers have access to the right resources, quickly and easily. It Helps in improving workplace productivity, increases collaboration across teams and ensures security of valuable data and business services.

SERVICES AND SOLUTIONS

- Datacentre Solutions
- Server, Storage and Backup
- Network Security
- Cloud Computing and Hosting
- Enterprise System Management
- Network and Systems Management/Administration
- Business Intelligence and Revenue Assurance
- Business Continuity and Disaster Recovery

CONNECTIVITY / NETWORKS

We have a long term proven experience in designing, deploying and managing simple to complex connectivity networks. Our experience and technical expertise allows us to seamlessly integrate various technologies to provide your business reliable connectivity solutions.

- **FIBER OPTICS**

We have the capability and expertise to provide fibre services for inside and outside applications. We utilize industry recognized methods and procedures for all of our clients cabling needs. We service and install both single mode and multimode systems. All of our fibre optic work is done in accordance with national standards and specifications

- **MICROWAVE / RADIO**

Our range of Microwave, Radio, Millimeter Wave (MMW), Free Space Optics (FSO), LTE and WiFi products can be combined to provide complete solutions to almost any wireless requirement.

- **HIGH - CAPACITY SATELLITE**

We provide high capacity satellite trunks using latest High Throughput Satellites (HTS) to deliver cost-effective bulk capacity in remote areas. Our SD-WAN solutions are easily deployed over traditional VSAT connectivity services, such as iDirect, DVB-S2/ACM, SCPC and others.

- **WIRED AND WIRELESS**

We specialize in designing the most efficient way to install and route your network cabling. Whether you have an existing cabling infrastructure and want to upgrade or if it is a new Cat5, 5e, 6, etc. installation, let us put our expert knowledge to work for you.

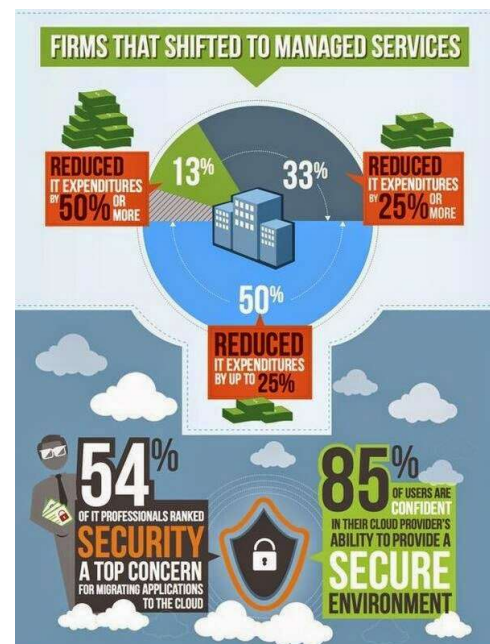

MANAGED SERVICES

Looking for an infrastructure that supports software-defined networking and network function virtualisation? Harness the power of our digital expertizes to manage your network. You can reduce operating and capital expenditure on technology and services as well as focus on strategic business initiatives. Deploy new applications and services with on-demand access to technical expertise!

Your network infrastructure needs to be secure, up-to-date and operating at the speed of business. With managed network services, NEXTDIGI can help you build, maintain or upgrade your network to meet requirements today and into the future.

BUSINESS APPLICATIONS

The current competitive landscape and stringent regulations require that organizations streamline their business processes to generate more value and transparency in their processes and supply chain. This significantly increases cost-efficiencies and flexibility.

NEXT DIGI provides business applications to control business processes and to monitor KPIs, assessing order lead time, payment terms and other such metrics.

Our solutions for Business Applications

We offer various scalable business applications, to design smart business processes, use resources in an efficient way, improve accuracy of forecasts, and implement predictability:

- Enterprise Resource Planning (ERP)**
- Customer Relation Management (CRM)**
- Business Intelligence (BI)**
- Hospital Management Systems (HMS)**
- Office Automation / Paper Less Environment Solutions**

SMART SOLUTIONS – Corporates/Homes/Industries

Simplify the way communications and collaboration works at your business. Move from being just connected to being truly productive, with tools that let your people take an active role in creating value, delighting customers and engaging colleagues in interactions that deliver meaningful results.

- And more...

Security and Surveillance

- CCTV Cameras
- Video Wall
- VHF/LTE Handsets
- Biometric Solution
- Drones
- Fleet Management System and more...

IOT Products and Solutions

- Smart Home/Office Care
- Smart Conference Rooms
- Smart Health Services
- Tracking devices
- Access Control
- And more...

TELECOM VAS

Our Next Generation software technology enables legacy system replacement, as well as innovative service launches in the areas of IP mobile messaging, Call Completion, convergence management, content management, virtual numbers and social telephony, convergent charging, conferencing, virtual contact centre solutions, call control and routing.

Our customized products and services in the Telecom and the IT industry are focused on achieving maximum ROI:

- Single platform for a wide variety of VAS services
- No requirement for integration of a new system for every new service
- Reduces the number of hardware nodes required significantly
- Testing and deployment of new services is speeded up
- Homogenous platforms making things easier to maintain
- Rich multi-model applications via multiple user interfaces
- Modular construction: Pick and choose the features/interfaces required
